

A Barrier comparison: Pythia vs OPT (2-epoch)**B Med/code barrier ratio****C OPT extended experiments — qualitative summary**

Experiment	Key result	Interpretation
Gaussian perturbation	0.0003-0.055 (all ΔW)	Replicates Pythia: unstructured noise negligible
Trajectory (21 ckpts)	Code 0.14→0.20 monotonic Medical 0.09→0.14 flat	Inverted-U Pythia-specific; trajectory shape arch-dependent
Per-block divergence	$r = 0.91$ (Pythia: $r = 0.995$)	GPT-2 architecture produces different layer-wise profile

Note: OPT experiments use 3-point LMC scans; 30+ scans vs 70+ for Pythia. Results are preliminary.
